

Year 6 – Summer Block 3 – Statistics

11th May 2020

PART 3 – Reasoning & Problem
Solving
WALT Use Line Graphs to
Solve Problems

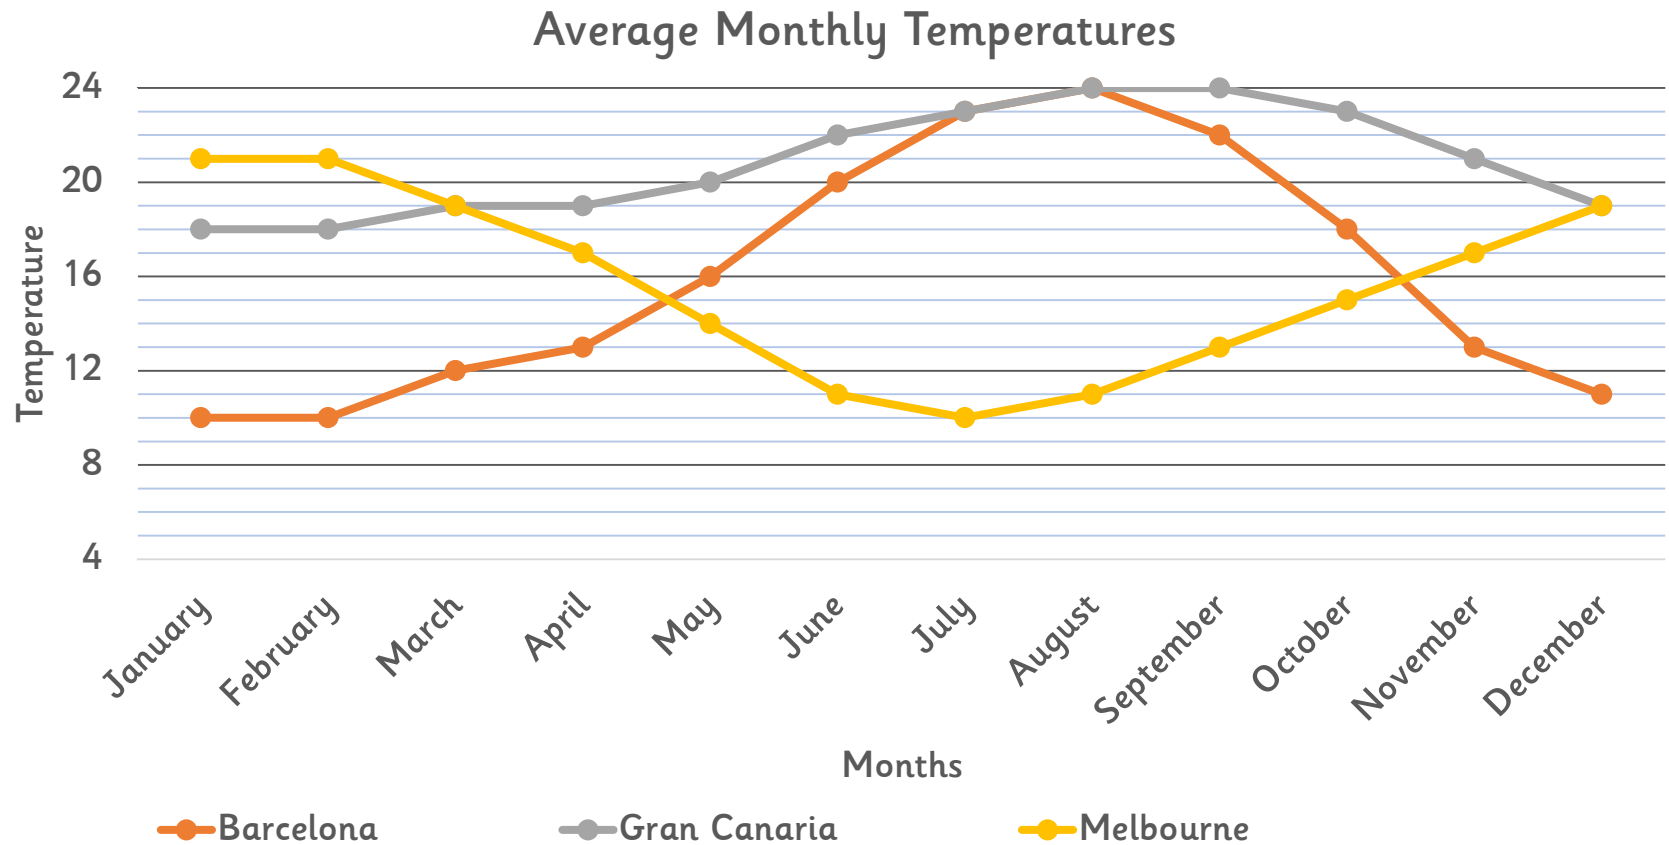

*See my notes in green to
help you.*

Problem Solving 1

Which place has the widest variation in temperature over the course of the year?

Problem Solving 1

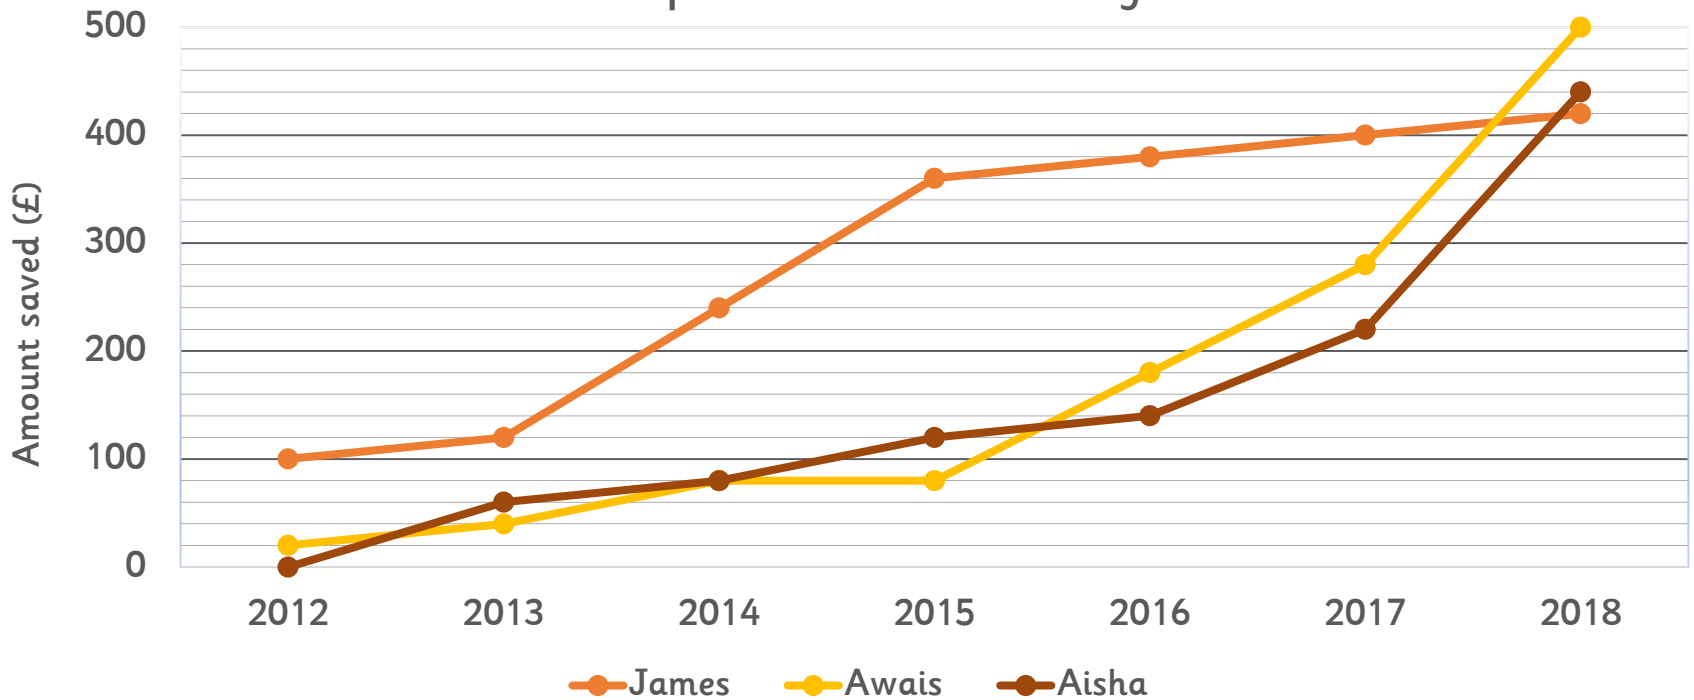

Which place has the widest variation in temperature over the course of the year?

Barcelona *(find the difference between the lowest and highest temperatures for each city)*

Reasoning 1

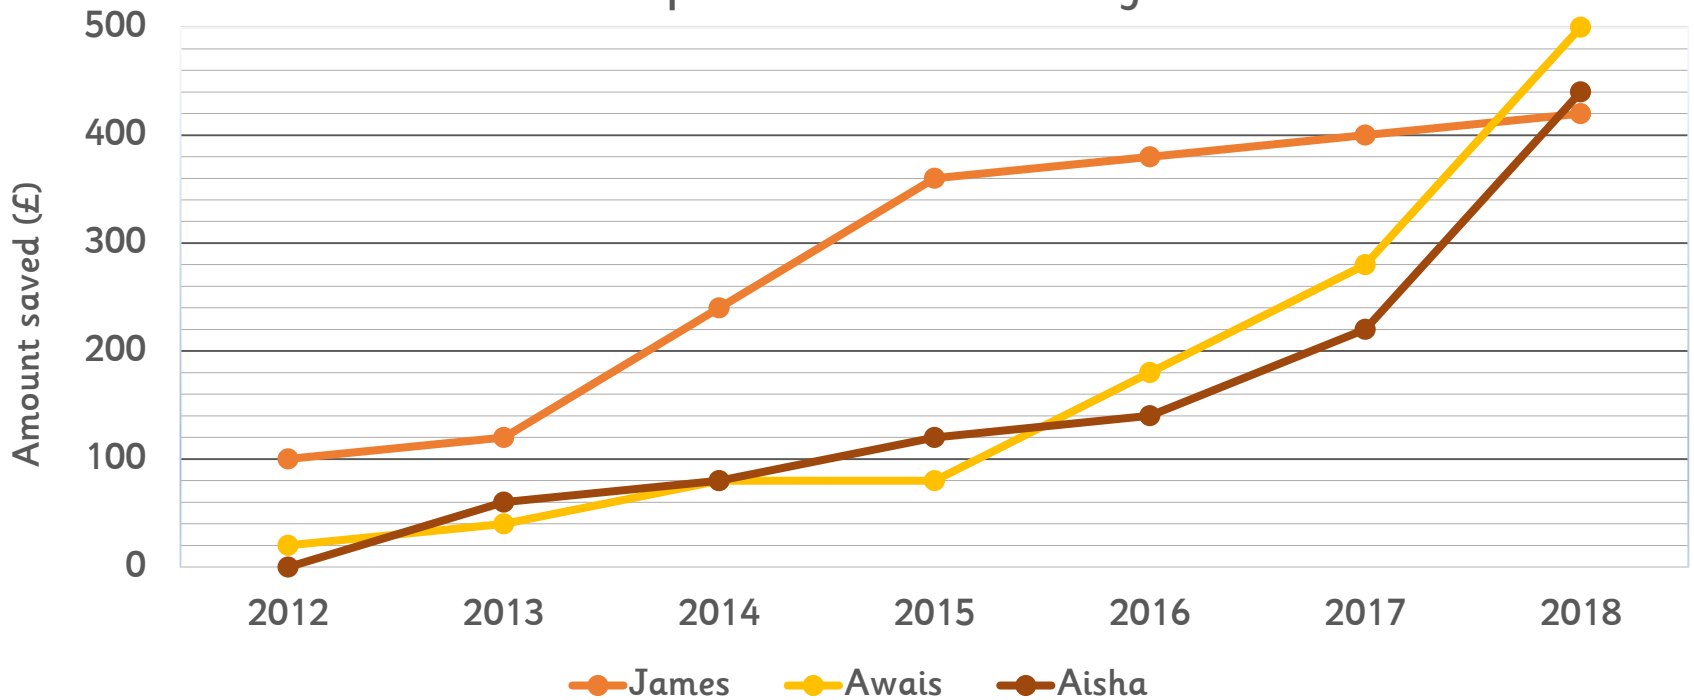

Graph of Children's Savings

What is the same about these children's savings and what things are different?

Reasoning 1

Graph of Children's Savings

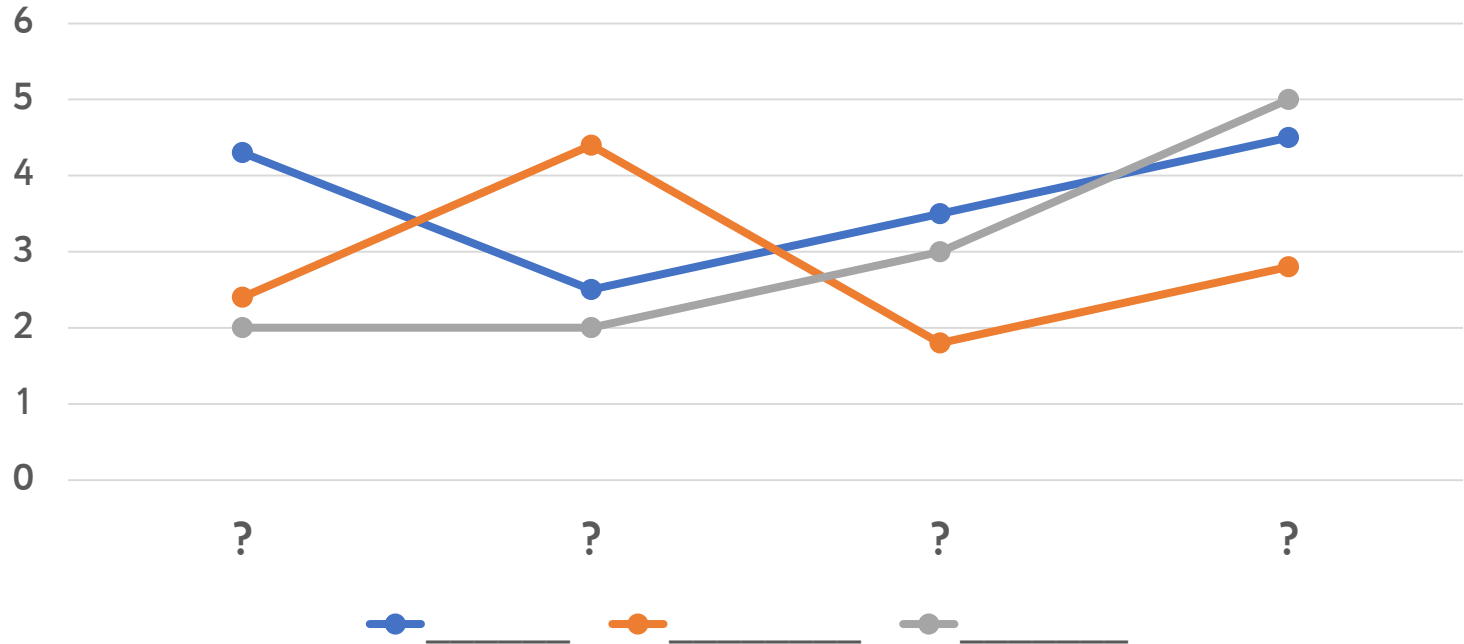

What is the same about these children's savings and what things are different?

Various answers; for example:

All the children increase their savings over time. James saves money every year. Awais doesn't save any extra money from 2014 – 2015.

Problem Solving 2

What could this graph be showing? Label the graph to show what you think it could be about. *HINT: Think about possible units of measurement the axis could be referring to and what the three different lines might represent.*

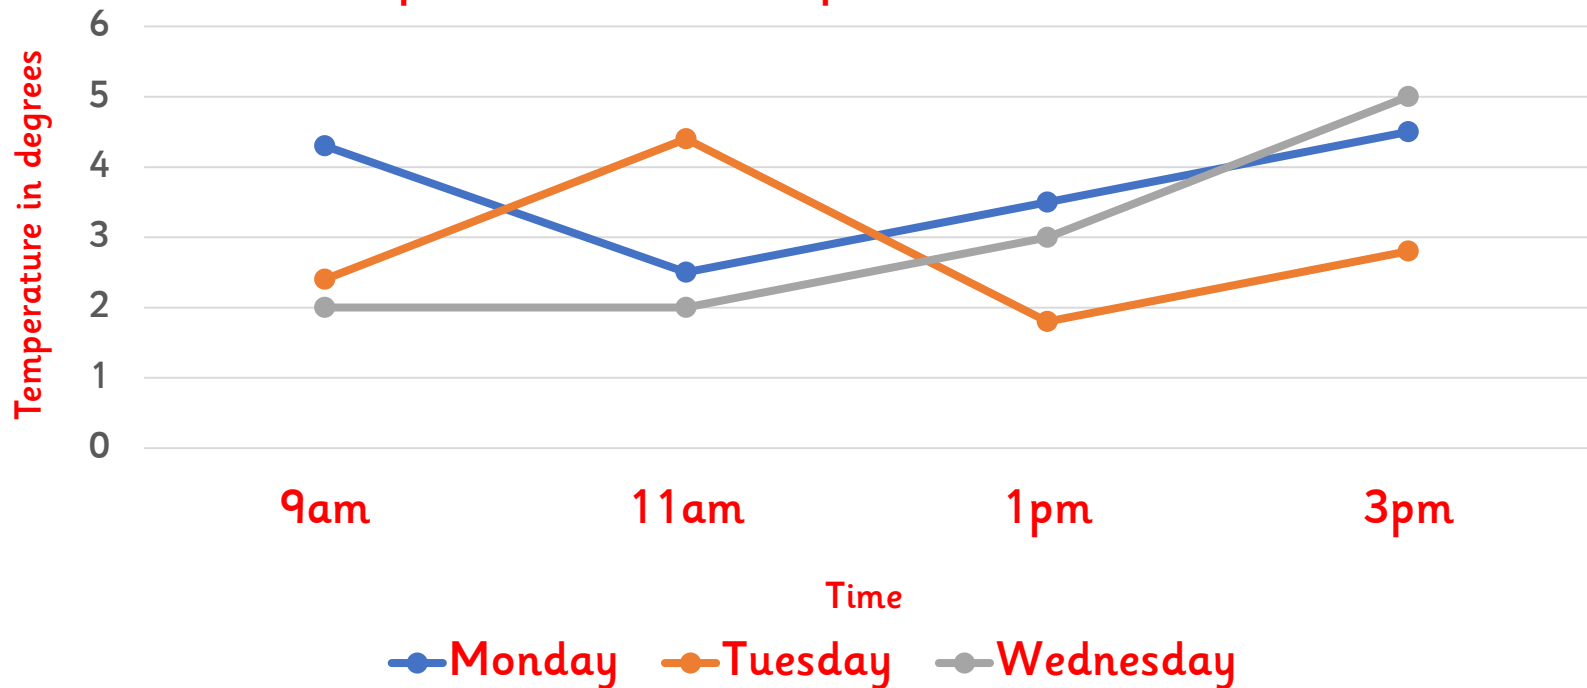

Problem Solving 2

What could this graph be showing? Label the graph to show what you think it could be about.

Example answer:

Graph to show the Temperature in a School

Well done! It's over to you now.

Go to Part 4 and choose your Star Challenge! Normal rules apply: page 1 will give you an easier challenge, page 2 will be about the same as what we've just practised and page 3 will be more of a stretch.

You only need to do the first set of questions on your chosen Star Challenge – the 'A' questions. If you want extra practice, you can then do the next set of questions – the 'B' questions. When you finish, don't forget to mark your answers before sharing, so I can see where you need help.
