

Today, you need to need to experiment with gravity!

Pick two items – ideally, two plastic water bottles like in the images you’ve just seen, but they can be any items you like.

You need to drop them at the same time as each other, and from the same height.

Fill in the chart below to explain what happens...

What experiment are you doing?	
What STEM learning are you doing?	
What are you using for your experiment?	
What happened (results of your experiment)?	
What could you do differently next time?
