1) Accept any correct answer, for example: $110^{\circ} 120^{\circ} 130^{\circ} / 245^{\circ} 90^{\circ} \quad 25^{\circ} / 270^{\circ} \quad 60^{\circ} \quad 30^{\circ}$
2) $a=143^{\circ} \quad b=225^{\circ} \quad c=98^{\circ} \quad d=83^{\circ}$
3) $135^{\circ}$
4) True - $90^{\circ}$ four times is $360^{\circ}$.

False $-120^{\circ}$ is an obtuse angle.
False - they show $150^{\circ}$ and $210^{\circ}$
False - acute angles are less than $90^{\circ}$ so the greatest angle that can be made with three acute angles is $267^{\circ}$.

1) $a=60^{\circ} \quad b=140^{\circ} \quad c=40^{\circ}$

You can ensure your answers are correct by adding the 5 angles together. The sum should be $360^{\circ}$ degrees.
2) Aamina $=135^{\circ}$ Bonnie $=65^{\circ} \quad$ Cris $=90^{\circ} \quad$ Daniel $=45^{\circ} \quad$ Emma $=25^{\circ}$
