Computing

WALT identify variables

WILF:
- Understand what a variable is and when it is used.
 – Find examples of where variables are used
 + Explore the different uses of variables.

Do you remember what a variable is?

Can you explain it?

Variables are used to store information to be looked at later and changed in a computer program.

Watch this video:

https://www.bbc.co.uk/bitesize/topics/zs7s4wx/articles/zw3dwmn

Then, list as many different variable uses as you can.
When you're finished, play a few different games on hour of code and note where you see variables being used and how they change.
