

WALT multiply and divide.

- WILF:
- Select the correct operation
 - Use place value to help you
 - Exchange as needed

Today we are practising our multiplication and division.
I would like you to use your place value columns to help you with
this when you get stuck, not forgetting to exchange as needed.

Multiplication:

We use *long multiplication* to help us see which numbers we need to multiply, then add them up at the end. Please see the example, then use this method in your work.

As the numbers get larger, you should use the same method.

Short Division

Please watch this video if you are unsure how to do short division: <https://safeYouTube.net/w/brKE>

If you have a remainder at the end, write 'r', then the number in the next column. Remember, remainders need an r, not a decimal point, as the actual decimal will be different than the remainder.

Work one digit at a time - does this number go into that one? No? Carry it. Yes? How many times?
