

# WALT write decimals as fractions.

## WILF:

- Recognise that decimals are parts of a whole.
- Use your place value to identify ones, tenths and hundredths represented in decimals.
- Read and write decimal numbers as fractions.

Have a look at the hundred squares and the fractions.

Using yesterday's learning, can you fill in the fractions and convert them to decimals? Use a place value column if you get stuck.

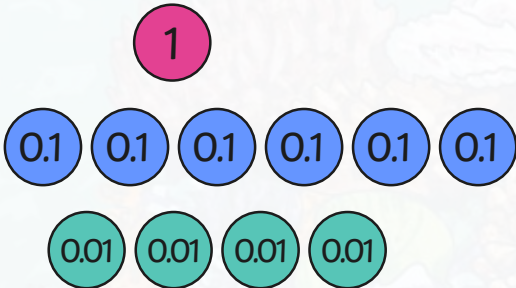

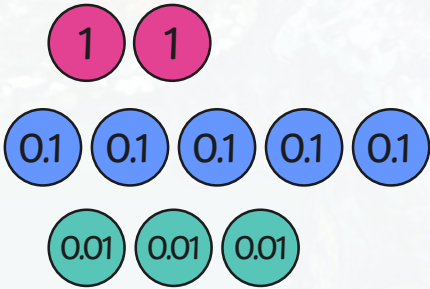

$$\frac{40}{100} = \frac{\quad}{10} =$$

$$\frac{230}{100} = 2\frac{\quad}{100} = 2\frac{3}{\quad} =$$

HINT: how many wholes are there? How many parts of a whole are there?

This table shows us what values our decimal is made up of.  
In row one we have 1 whole (one), 6 tenths and 4 hundredths.

Place Value Counters	Decimal	Decimal Expanded
	1.64	$1 + 0.6 + 0.04$
	2.53	$2 + 0.5 + 0.03$

What is being shown in row 2?  
What would it be as a fraction?

Have a look at this table.

Can you complete the second row's words and fraction?

Words	Fraction	Fraction Expanded
Three ones, six tenths, eight hundredths	$3\frac{68}{100}$	$1 + \frac{6}{10} + \frac{8}{100}$
	—	$2 + \frac{3}{10} + \frac{7}{100}$

Now convert the second fraction into a decimal. How many ones, tenths and hundredths?

I'm thinking of a number. The number contains the digits 4, 7 and 2.

The number contains 2 decimal places. The number is greater than 3 and the tenths digit is greater than the hundredths digit.

What could the number be?  
Could there be more than one possible answer?

Extra challenge: What extra clue could you write which would mean the number could be only 7.42?

Mark with a dot roughly where 4.75 is on each of these number lines.

## Extra challenge

Write three numbers with 2 decimal places (e.g. 2.13), and an equivalent mixed number fraction (e.g.  $2\frac{1}{4}$ ), that would fit in the sections of the number line.

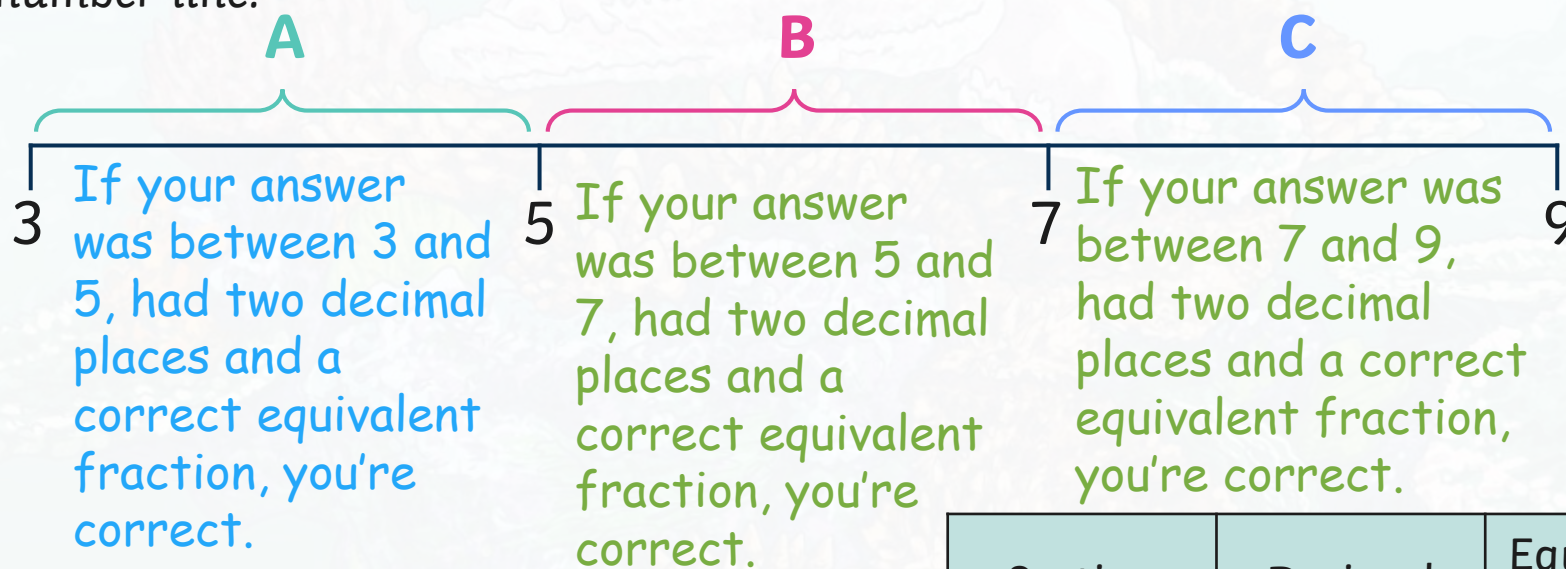

There are lots of possible answers.

## Extra challenge

Write three numbers with 2 decimal places (e.g. 2.13), and an equivalent mixed number fraction (e.g.  $2\frac{1}{4}$ ), that would fit in the sections of the number line.

Example →

Section	Decimal	Equivalent Fraction
<b>A</b>	4.45	$4\frac{45}{100}$
<b>B</b>	5.79	$5\frac{79}{100}$
<b>C</b>	7.04	$7\frac{4}{100}$

# Dive in by completing today's activity!

1) a) Mark with a dot where  $1\frac{1}{2}$  is on the number line.

b) Mark with a dot where  $2\frac{1}{2}$  is on the number line.

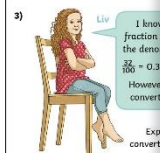

2) Work out the mystery numbers.

- a)
  - contains the digits 1, 4,
  - contains 2 decimal places
  - greater than 3
  - tenths digit is smaller than 5

- b)
  - contains the digits 2, 1,
  - contains 1 decimal place
  - no tens
  - whole number is greater than 1

c) Choose an answer from a)

1) Write equivalent fractions and decimals for the models. One has been done for you.

2) Complete the tables.

Place Value Counters	Decimal	Decimal Expanded
	2.43	$2 + 0.4 + 0.03$
	3.01	
		$5 + 0.2 + 0.03$

Words	Decimal	Decimal Expanded
Four ones, two tenths, nine hundredths.	$4\frac{2}{100}$	$4 + \frac{2}{10} + \frac{9}{100}$
		$3 + \frac{8}{100}$
	$2\frac{17}{100}$
